

Observations about the supernova SN2008fv before and after.

Taurus Hill Observatory research team photographed the supernova SN2008fv 28./29.9.2008 at THO. The supernova is discovered by the Koichi Itagaki and it is located in galaxy NGC 3147. The same galaxy was photographed at the THO 21./22.9.2008, but that time the supernova wasn't visible. The supernova SN 2008fb is about 15.6R magnitude bright in these THO pictures. Observers: Veli-Pekka Hentunen and Markku Nissinen
