

SN2007fv photographed again at Taurus Hill Observatory

Supernova SN2007fv, discovered by the Koichi Itagaki, was photographed at Taurus Hill Observatory 7./8.10.2008 by the Taurus Hill Observatory research team. The supernova was at the moment of the photographing brighter than last time it was observed at THO. In this picture below the SN2007fv is about 14.3CR magnitudes bright. Observers: Veli-Pekka Hentunen and Markku Nissinen.
