

The gamma-ray burst GRB 090313 observed

The gamma-ray burst GRB 090313 was observed by Markku Nissinen 13.3.2009 about one hour after the discovery of the GRB. Markku used the GRAS-04 telescope that is sited in Mayhill, NM, USA. The exposure times that Markku used were 300 sec., 360 sec. and 600 sec. Below are the results.

| obs midpoint(UT) | exptime | mag(CR) | mag.err |
|---------------------|---------|---------|-----------------------|
| 2009-03-13 10:14:41 | 360 sec | 16.5 | +/- 0.3 (3 x 120 sec) |
| 2009-03-13 10:27:59 | 300 sec | 16.7 | +/- 0.3 |
| 2009-03-13 10:39:53 | 600 sec | 16.9 | +/- 0.3 |
