

SN 2008ip, SN 2009N, SN 2009bw and Messier 13 observed

The Finnish summer sky is near and photographing is getting more and more difficult each day. Here are some pictures from the 14.5.2009. Messier M13 Supernova SN 2008ip in galaxy NGC4846. The brightness is about (not measured) 19 magnitudes. Supernova SN 2009N is located in the galaxy NGC4487. Supernova 2009bw is still quite visible in the CCD -pictures. This picture is taken at 01.55 Finnish time when the sky was already quite light.
