

## Asteroid 409 Aspasia's light curve almost completed

Aspasia's light curve was measured almost completely. Observation of the whole light curve (9,020 h) can't yet be done because too short dark time during the night. Weather conditions were good, even moisture was pretty high - almost 90%. This time Moon wasn't disturbing observation.&nbsp; We used TYC 1181-1748-1 (C1) and TYC 1181-1651-1 (C2) as comparison stars. We used photometrical R-filter and each exposure time was 60 s. (
